## INFORMATION

Welcome to this, our first brochure for One material.

Here at Ramson, we have been working on innovative packaging solutions that reflect our passion to minimize our impact on the planets' resources.

The ONEMATERIAL range is developed to be 100% recyclable, which means that all components used to make the item are manufactured in ONE material only.

For our Dispensers there is a patented PP and PE Spring technology, and diptubes are made in PE or PP depending on what material the dispenser is made from.

We are delighted to share these developments that are Based around three themes with you:

**Recycle:** ONEMATERIAL products are monomaterial pack solutions that are readily recycled in the waste collection streams

**Reuse:** these products take the heavier and complex, consumer-appealing outer components and allow them to be re-used

**Refill:** these developments are engineered to fit our reuse ranges to extend the life of the packs without compromising performance or consumer experience.
